

Pick-it S2

MM cartridge

MSRP: 159€ (incl. VAT)

- Moving Magnet principle
- Simple and fast setup
- High output voltage
- Ideal for medium weight tonearms (15-20g)
- Very dynamic
- Suiteable
- Needle can be exchanged if needed
- Robust metal body

Needle type:	elliptical
Weight:	18,5 g
Stylus tip radius:	13/25 µm
Frequency response:	20 - 22.000 Hz
Output voltage:	6 mV
Channel separation:	24dB @ 1kHz
Compliance dynamic/lateral:	7 µm/mN
Tracking force range:	2,0-5,0 g
Recommended tracking force:	3,0 g
Tracking angle:	20°
Internal inductance:	450 mH
Recommended load resistance:	47 kΩ
Recommended load capacitance:	200-600 pF

Concorde at its roots

Ortofon's Concorde series was highly acclaimed especially at professional DJ's.

An often overlooked detail is, that it had its roots as a HiFi cartridge. That is exactly where we want to position it again. This special collaboration between Pro-Ject and Ortofon revealed this high value phono cartridge - Pick-it S2!

Pick-it S2: Stylus par excellence

Suitable for all tonearms with SME union nut, Pick-it S2 is easily mounted and removed. The body of this system is held in elegant silver looks.

Pick-it S2 offers a thrilling and exciting sound, which oozes of details and high fidelity, it unveils unheard precision, dynamics and sound stage in this price range. With its six Millivolts output voltage it is prepared for all weaker phono stages and DJ turntables. The SME connections enable the customer to mount Pick-it S2 within seconds. This offers you the freedom to install your favourite cartridges on any suitable tonearm in no time. You can exchange or upgrade the needle if needed, even for a higher grade one (like Ortofon OM20/30). The metal body provides high stiffness, which gives the sound its unrivalled dynamic character.
