- Musical Fidelity's M8xi is **something of a monster**.
- **Rarely do we hear an integrated** at this level that sounds **so controlled and unstressed**.
- We're impressed by the M8xi's **grip and authority at low frequencies**. It **kicks hard** when the music demands, but just as pleasingly delivers the **notes with agility**.
- Its **midrange is clean, clear** and rendered with a **solid amount of detail**. Voices **come through crisply** and remain easy to follow even when the music gets busy.
- We suspect that the M8xi is still likely to **satisfy** all but the **most critical listeners**.
- It **sounds massive**, rendering an **expansive but nicely focused soundstage**. It's an **open and stable presentation** where **instruments are locked in position** and never waver, even when the music becomes demanding.
- The M8xi is a **thrilling listen, delivering all the drama** packed into the **original performance**.
- The M8xi **never lets us down**, rendering the sound with **verve, insight and a physicality** that is **mighty appealing**.
- You can throw pretty much anything at this amplifier and it'll **never seem out of its depth**, yet **beneath all that muscle** is a product that has **enough emotional stretch to satisfy**.
