

Debut Carbon EVO

"Right up there at the top"

... there was a sense of perfect balance to the sound.

What I loved straight away however was the detail... and the separation.

... we're talking high-quality analog here.

Superb straight away – and immediately musically engaging.

... again the Debut showed it could deliver this track beautifully in true and best analogue fashion.

Pro-Ject's Debut Carbon EVO turntable is a fine starter package, with assured performance. By this I mean no weak spots...

**OUTSTANDING - amongst
the best**
