Dang – really, really, really impressed

Watch the Video

When it comes to the **sound-stage** these beauties **sound far larger** than their physical size would lead you to believe. You get **pin-point accuracy** with these bad boys.

Intelligibility is high AF with these speakers. Lyrics, dialogue and individual notes should come across with a greater sense of **focus, presence and accuracy.**

The Speaker Box sounds **terrific – articulate, well mannered and tonally right** through the mid-range and treble is how I would sum up the Pro-Ject speakers.

The Speaker Box 5 S2 is **stunning** – from about 100Hz to 2kHz – I'm talking the low mid-bass and midrange the Speaker Box 5 S2s are **near as makes no difference – flat.**

The 5 S2s played with **absolute confidence** up to about 95dB without a hint of strain or distortion.

Their **construction** leads me to believe they're going to last.

The speaker Box 5 S2's tweeter toes that line between **airy and extended** without crossing over into aggressive territory.
